

Carrot XL

—
SAFETY FEATURES

Catering for safety
and the importance
of keeping the user
in a supported
posture for travel.

Carrot XL

Carrot XL caters for safety and the importance of keeping the user in a supported posture for travel. This larger sized car seat is suitable for older children and adult users who will not fit into the Carrot 3000.

- Ensure Carrot XL back is in contact with the vehicle seat back (no big gap behind headrest).
- Strap at the rear of the Carrot XL's headrest is to be secured around vehicle's headrest, or backrest.
- If the car has individual separation in the rear seats, the lower horizontal strap at the rear of the Carrot XL is to be secured.
- Ensure the shoulder straps are firmly secure, and are level with the child's shoulder height, if these are below the child's shoulder height, the seat needs to be grown – Please contact your Occupational Therapy team.
- If a cross strap is being used, please ensure this is sitting no higher than the top being level with the child's underarm.
- Ensure child has not outgrown the weight capacity which is 36-75kg. If child is approaching this weight limit, consider what would be next option.
- Ensure the car's seatbelt is used EVERY time. This is to be securely fastened OVER the child and seat. Please note this seat does not have capacity to have a belt threaded through the back as it is a booster seat. You are able to purchase and install a padded sleeve for the seatbelt if you feel the belt is going to irritate your child.
- Please note the red belt guides are to be used to ensure the belt is sitting correctly, is kept low across the child's hips and is kept off the child's face.
- Periodically check for loose or missing parts.
